quartered in three temporary buildings about 30 meters apart northwest of the field. This was in the vicinity of the taxiway, ** feecently, German convicts also worked at the field.  3. On 20 July, 10 grab cranes (Greifbagger) were counted at the field. Five were in operation at the northwestern section and three at the southeastern section of the field. Sixteen deed locantives 12 of which were counted to each diesel locantive. Since the narrow-gauge field railway trackage was extended considerably, source assumed that the soil required for grading was to be halled from a distance. Five motor rediens were continuelly used for grading. Fork was still being done in three shifts. The working sites were illuminated at night. East of the work was being done at the northwestern section of the field. The staking off of a runway was not observed. ***  10	2.	Soviet convicts were observed working at the field for the	first time on
field. This was in the vicinity of the taxiway, ** Accently, German convicts also worked at the field.  3. On 20 July, 10 grab cranes (Greifbagger) were counted at the field. Five were in operation at the northwestern section and three at the southeastern section of the field. Sixteen deed locancives 12 of which were could be each diesel locancive. Since the nearcov-gauge field railway trackage was extended considerably, source assumed that the soil required for grading was to be halled from a distance. Five motor reliens were continually used for grading. For twe still being done in three shifts. The working sites were illuminated at night. East of the work was being done at the northwestern section of the field. The staking off of a runway was not observed. ***  10 Comment. Same source previously reported that only 120 laborers worked in each shift up to 7 July 1950.  21 Comment. It was also reported from excepted a first Soviet convicts were engaged in construction work.  22 Comment. It appears that, upon completion of runway construction at the Ternouchon, Terbst, Telzow, Fuebnitz, Triesen or Lerschurg airfields, construction of a runway will begin at Ternut-Bindersleben airfield.		quartered in three temporary buildings about 30 meters apa	rt northwest of the
were in operation at the northwestern section and three at the southeastern section of the field. Sixteen diesel locementies 12 of which were continually in operation, were seen at the field. Mout 10 to 12 time—cars were couled to each diesel locemetive. Since the nerrow—gauge field railway trackage was extended conside ably, source assumed that the soil required for grading was to be halled from a distance. Five motor rollers were continually used for grading. Nork was still being done in three shifts. The working sites were illuminated at night. Lost of the work was being done at the northwestern section of the field. The staking off of a runway was not observed. ***  ******  *****  ****  ****  ****  ****		field.
